

Disinfectants & Cleaners: Create Aqua-Clear Protected Wallcovering

Given the current concern regarding viral transmission, the mill making Create Wallcovering has tested the safety of 13 disinfectant/cleaning products on our wallcovering.

The testing protocol involved spraying a wallcovering sample until wet and letting stand 20 minutes minimum.

Sample is sprayed again until thoroughly wet and secured in Gardner abrasion tester. Gardner sponge run 200 times. Tester was then stopped; sample dried & visually inspected for damage to print layer.

*When viewing results please note
the following disclaimers:*

- Results as noted here refer to the affect of disinfectants and cleaners on the surface appearance of Create Wallcovering.
- This report holds no claims as to the effectiveness or efficacy of noted products in the arrest, reduction or elimination of COVID 19.

DISINFECTANTS

RESULT

50/50 chlorine bleach/H2O	No Change
Oliver - hydrogen peroxide	No Change
Virex - ammonium chloride compounds	No Change
Nemesis - ammonium chloride compounds	No Change
Neutral Q - ammonium chloride compounds	No Change
Rely - ammonium chloride compounds	No Change
Micro Q - ammonium chloride compounds	No Change
